Linux Shared Hosting

Wordpress Shared
Hosting

Windows Shared
Hosting

SECURITY

Virtuhos Technologies provides protection to your website servers against intrusions. Our service detects and blocks malicious traffic directed to your websites and applications. SSL Certificate helps to improve the security of your website by encrypting all the incoming and outgoing information between Web server and visitor's web browser.

PAYMENT GATEWAY SERVICE

Virtuhos Technologies provides one of the best payment gateway solutions services. We are a revolutionary bank-neutral payment processor for online merchants in India. Our services offer merchants cost-effective solutions, various payment acceptance modes and a secure, robust technology platform.

Virtuhos Technologies acts as a one-stop payment gateway solution for merchants who conduct online transactions or e-commerce. We enable you to go beyond accepting payments through cash, cheques and demand drafts with ease. You can accept online payments through various pay modes including Credit Card, Debit Card, Internet Banking and Mobile Payments.

Virtuhos Technologies offers a secure, merchant-centric payment gateway service. This means that we help you receive payments in a secure environment, from a bouquet of payment service offerings. So whether you sell products online, provide services with online payment collection

Payment gateways that come with a shopping cart provide the customers with the required ease of transaction and it is easier to come back to the website again and again when such a system is present. We deal with payment gateway integration to receive payments online some of the integrations we did for customers like CCAvenue, Razor Pay, InstaMOJO, PayU, PuyuBiz, PAYTM, PayPal, Atom, Authorize.net, stripe etc...

Some payment gateways offer white label services, which allow payment service providers, e-commerce platforms, ISOs, resellers, or acquiring banks to fully brand the payment gateway's technology as their own. This means PSPs or other third parties can own the end-to-end user experience without bringing payments operations—and additional risk management and compliance responsibility in house.
